Engineer building tool augmented AI agents that reach production and stay there. Mate is a LangGraph agent whose state machine reasons over a vector database on a schedule, calls tools, and writes back its reasoning. Storía serves retrieval augmented answers over per tenant corpora on pgvector, delivered through WhatsApp and voice agents, with Redis and BullMQ so ingestion survives load. Eight years of production software engineering underneath that, in TypeScript and Python, with API design, testing and debugging habits to match, plus the enterprise integration work that wires an agent to systems it does not own. Based in Bogotá, working US Eastern hours, native Spanish and English at C1.

Core Competencies

- **Agent Orchestration:** LangGraph state machines and multi step reasoning loops, tool and function calling, error handling and retries, supervisor and critique agent patterns, MCP.
- **LLM Practice:** Anthropic Claude and other frontier models, prompt engineering and iteration, model selection by tradeoff, guardrails and confidence thresholds on output.
- **Retrieval:** RAG pipelines, embedding pipelines and semantic search on pgvector, chunking strategy, retrieval tuning, per tenant isolation.
- **Realtime & Voice:** voice agents and WhatsApp Cloud API delivery, WebSockets and Socket.IO, streaming and long running conversation state.
- **Tool & Data Integration:** REST and webhook design, Microsoft Graph and Teams API, ServiceNow, ERP integration in production, OAuth and token flows, least privilege and secret management.
- **Engineering Discipline:** TypeScript and Python in production, API design, automated testing and test quality review, Docker, CI/CD and GitHub Actions, caching, cost and latency awareness.
- **Domain:** multitenant customer support AI, enterprise unified communications telemetry, mobile commerce and paid acquisition.

Professional Experience

- **Level60 Consulting** **Remote, Bogotá, Colombia**
Principal Full Stack Engineer *2021 to 2026*
 - Principal engineer on the platform for five years. Joined it two years in and became the constant across it, owning the integration and alerting layers: multitenant Exchange calendar sync, Teams Panel discovery and tracking, peripheral fault detection, and global alerting with daily caps and summary digests.
 - Principal author of the separate Python and Flask service on Azure that integrates the platform with the client ERP.
 - Principal engineer on a room health platform monitoring Microsoft Teams Rooms, Cisco and Zoom hardware, including multitenant Exchange calendar sync and Teams Panel discovery.
 - Replaced a Logic Apps pipeline with direct Microsoft Graph ingestion for ServiceNow incident creation.
 - Administered the Azure platform: Entra, Blob Storage, Logic Apps, Azure SQL and Analysis Services; diagnosed and resolved Azure SQL quota failures on archive tables.
 - Implemented single sign on through Entra ID and ADFS, and assessed the platform impact of Microsoft's TeamworkDevice API retirement.
 - Traced a six month reporting gap to an expired storage credential and a row terminator mismatch.
 - Established branch protection policy requiring PR review before merge.
- **Own Products: Luxura** **Bogotá, Colombia**
Independent Engineer *2021 to Present*

- **Luxura** (live, Google Play): invitation based dating app for Bogotá and Medellín. Eleven weeks from empty repository to store; 5,000+ downloads. Next.js, TypeScript, Capacitor, PostgreSQL, Prisma, Socket.IO, RevenueCat, AppsFlyer, AWS Rekognition.
- **monia** (live demo): personal finance ledger built from bank email. Transaction alerts and statement PDFs parsed into ledger rows across five institutions and five currencies, with idempotent ingestion. A double counted row is a wrong balance. TypeScript and the Gmail API.
- **Storía** (in development): multitenant AI customer service for LatAm small business. Retrieval augmented answers over per tenant corpora: pgvector, Redis, BullMQ, WhatsApp Cloud API, voice agents.
- **Mate** (built, not launched): LangGraph agent whose state machine scores compatibility against a vector database on a schedule, then writes the user the reason. Traced a production incident to fixtures covering 75% of a path.
- Self hosted production on Hetzner with Docker and Coolify; ran paid acquisition on Meta, TikTok and Google with attribution modeling. Built the app, ran the server, bought the ads.

- **Gara Group Inc.** **Remote, Cúcuta, Colombia**
Full Stack Developer *2020 to 2021*
 - Built web applications for direct sales and network marketing platforms using Laravel and Vue.
 - Developed both the distributor back office and the customer facing sites.
- **Pukara** **Remote**
Freelance Full Stack Developer *2018 to 2020*
 - Built hospital management software for a Spanish client.
 - Consulted across several client projects.

Education

- **freeCodeCamp** *2016 to 2017*
Full Stack Certification
 Front end and back end web development, JavaScript, APIs.
- **UNET, Universidad Nacional Experimental del Táchira** **Venezuela**
Ingeniería Informática (two years completed) *2014 to 2016*
 Computer science fundamentals.

Languages

- Spanish (native), English (C1, works US Eastern hours in English daily).
